

Crucial® Adrenaline Solid State Cache Solution

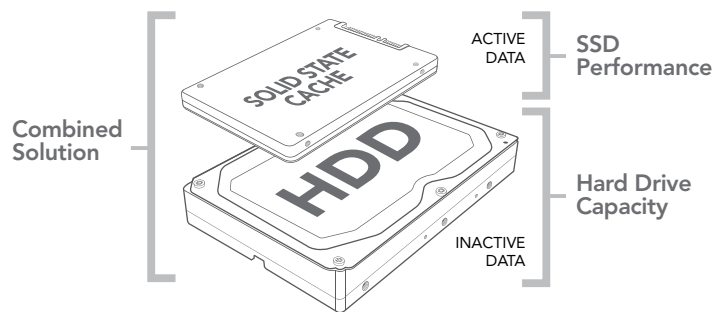

BENEFITS:

- **Best of both**—SSD-like performance for your existing hard drive at an affordable price
- **Performance**—Dramatic PC performance gains
- **Reliable**—Tested and backed by a 3-year limited warranty
- **Quality**—Leverages Micron's industry-leading NAND technology
- **Crucial**—a trusted name in SSDs

The best of both worlds.

Are you ready for the Adrenaline rush? The Crucial Adrenaline Solid State Cache Solution delivers SSD-like performance without compromising the capacity of your hard drive. While traditional hard drives offer a lot of storage at a low cost, solid state drives can access that content much more quickly. This innovative performance upgrade uses solid state technology as a cache for your existing hard drive to create a single, enhanced storage system.

Lots of speed, lots of storage.

The Crucial Adrenaline solution consists of a 50GB Crucial m4 SSD with a 3.5" adapter bracket and caching software. The solution intelligently places, or "caches," the most frequently needed files (active data) on the SSD and keeps less frequently used files (inactive data) on the hard drive. While the best performance gain is achieved from replacing your hard drive with a solid state drive, Crucial Adrenaline allows you to keep the capacity of your hard drive and still see significant performance improvements at an affordable price.

An easy upgrade.

Upgrading a system with Crucial Adrenaline is a simple process. Simply connect the SSD to the motherboard with a standard SATA cable, start the computer, and then install the caching software. Once installed, the software combines your existing hard drive and the solid state cache into a single storage system. The caching software is fully automated, runs in the background, and requires no user management.

Choose Crucial.

It didn't take long for Crucial to build the same outstanding reputation for SSD products as we've long enjoyed for our aftermarket DRAM upgrades. Remember, we are a part of Micron, a leading innovator and manufacturer of SSDs, so we don't buy our products from someone else and simply label them to sell. We leverage Micron engineering resources to refine them, test them, and back them with terrific service, support, and a limited three-year warranty so you have the confidence your product will serve you for years to come. Crucial is the brand you can count on.
